

WHAT IS CLAIMED IS:

8. (NEW) System for the care of contact lenses, comprising a receptacle, a hydrous  $\text{H}_2\text{O}_2$ -solution chargeable or charged into the receptacle, and a catalyst which consists of a platinum layer and whose surface is in contact with the hydrous  $\text{H}_2\text{O}_2$ -solution, and

characterized that, in addition, a silver layer (7) applied to a carrier is in a direct contact with the hydrous  $\text{H}_2\text{O}_2$ -solution situated in the receptacle by means of a surface which has a surface dimension not influencing the durability of the platinum layer.

9. (NEW) The System according to claim 8, wherein the silver surface amounts to less than approximately  $30 \text{ mm}^2/\text{ml}$  of the charged  $\text{H}_2\text{O}_2$ -solution.

10. (NEW) The System according to claim 1, wherein the silver layer is provided on a hold-down device configured to immerse the contact lens in the  $\text{H}_2\text{O}_2$ -solution.

11. (NEW) The system according to claim 10, wherein hold-down device is provided on an underside of a closing cover.

12. (NEW) The system according to claim 10, wherein the silver layer is provided on one side of the hold-down device, and the platinum layer is provided on another side of the hold-down device, the hold-down device consisting of glass.

13. (NEW) The system according to claim 8, wherein the hydrous 3% H<sub>2</sub>O<sub>2</sub>-solution is a physiological solution.

14. (NEW) The system according to claim 8, wherein the 3% H<sub>2</sub>O<sub>2</sub>-solution has a pH-value of approximately 6 to 8.
